Mountain Weather Forecast

Ground Conditions Supplement

Date: Saturday 30 March 2024 Location: Helvellyn summit at 11:00 Full report: The vast majority of the Lake District fells & popular paths are now clear of snow with the exception of Helvellyn where steep north through east facing aspects above 700m are still holding a significant amount of snow.

Striding & Swirral Edges can be ascended & descended without setting foot on snow with careful route choice and sticking mainly to the crest. However many of the less exposed 'easier' paths that lie on the northern flanks are still snow covered & hazardous. Unstable & thawing cornices were still present above some steep north through east aspects. The snow was soft and thawing at all levels today but insecure where it overlies steep grass & rock and there is still the potential for a long slide if you lose your footing in the wrong place. Carrying microspikes is still strongly recommended for anyone venturing on to steep & exposed or snow covered terrain, including the Edges, especially if summit temperatures drop below freezing. Full winter clothing (waterproofs, extra warm layers, hat & gloves), and equipment including a map, compass and headtorch are all essential to safely enjoy Easter on the high fells. Temperature: plus 1.2 C, Maximum wind speed 20.0 mph, Wind chill: minus 6.3 C, Average wind speed: 17.6 mph
